Muwaffaq Yusuf

Product designer & design engineer

SUMMARY

Product designer with **4+ years** across sports tech, marketplaces and finance apps, and I build what I design. I set up the design system before the screens, design every state rather than just the happy path, and take work from Figma to production code in Next.js, React, TypeScript and Tailwind. I have designed and built **8 websites and apps**, set up **5 design systems** and shipped **2 live products**, including my own lending app, treeti: **72 people** signed up and **₦549,300** was recorded in its first three weeks.

EXPERIENCE

Lead Designer · Nūring

Jan 2025 – Present · Remote (Ontario, Canada)

Nūring makes a smart glove that reads grip to measure an athlete's effort, recovery and load, starting with baseball.

- Redesigned the web app for athletes, coaches and guardians and **coded its whole front end**, then worked with the backend engineers as they connected the APIs.
- Built the design system the code runs on: **62 components, 39 colour tokens and 14 full-page templates**, shared by every surface of the product.
- Designed data-first screens that turn grip signals into clear decisions: a five-band score scale measured against each player's own baseline, and status colours that always come with a word.
- Prototyped interactions in Framer before handoff, and wrote the specs engineering builds from.

Product / UI Designer · HoBeei

Apr 2022 – Dec 2025 · Remote

UI designer on a gamified free-cycling marketplace with a virtual currency, live bidding and social features. I turned the founder's product concepts and sketches into the full UI.

- Designed the marketplace, live bidding and the Buzzes virtual wallet with **every state**: active bids, countdowns, won and lost, plus loading, empty and error screens.
- Built the Figma design system engineering worked from, and carried specs and assets through to shipped builds.

SELECTED WORK

treeti LIVE · MY OWN PRODUCT

usetreeti.xyz

Interest-free lending records between family and friends, with witnesses, repayments and reminders. I designed and built it in Next.js and Supabase. Launched 14 October 2026: **72 sign-ups, 23 agreements and ₦549,300 recorded** in three weeks, and tester feedback simplified 8 flows within 10 days.

QuickPay CLIENT · FINTECH

Case study

A Nigerian wallet and bills app. I audited **105 inconsistent screens** and rebuilt them as about 91 on one token system: 120+ variables in light and dark, 52 documented components and 690 layers renamed. I raised contrast to WCAG AA (card labels from 2.59 to 4.59 : 1), wrote seven rules for showing money, designed every state, and specified motion for engineers with springs and haptics.

SELECTED WORK, CONTINUED

Portfolio and Playground LIVE

muwaffaq.pages.dev

My site, built in Next.js, React and TypeScript on Cloudflare. It includes **16 interactive UI experiments** in mobile, web and motion: a dashboard whose chart reshapes between ranges, a drag-to-reschedule calendar, a data table with bulk actions, a spring tuner and shared-element transitions. Every piece works with the keyboard and screen readers, meets WCAG AA contrast and respects reduced motion.

PharmaQuest LIVE

pharmaquest.pages.dev

Gamified practice for the Canadian pharmacist qualifying exam (PEBC), built for a pharmacist preparing for it. **257 questions** with a rationale for every option, spaced repetition, daily streaks, XP and 12 badge series. Designed and built in React, Vite and Tailwind, with cloud save, on Cloudflare Pages.

Sarki Energy CLIENT · CORPORATE SITE

Case study

A site that explains eight business lines to very different visitors, from a homeowner buying cooking gas to a government agency. I mapped the brief into **31 page types** before designing, and shipped 26 in Next.js on Cloudflare, including a station locator and working enquiry and quote forms.

Almutamir · Axis Urban CLIENT · WEBSITES

A rebuilt Hajj and Umrah booking site, and a seven-page Framer site for an urban infrastructure company.

SKILLS

Product design	Design systems and tokens, information architecture, every-state design (loading, empty, error, pending), prototyping, motion specs, accessibility to WCAG AA
Front end	TypeScript, React, Next.js, Astro, Vite, Tailwind, modern CSS (container queries, CSS modules), Motion for React, Supabase, Cloudflare Pages and Workers
Quality	Accessibility to WCAG AA (keyboard, screen readers, contrast, reduced motion), responsive and mobile-first layouts, image and font performance, Playwright for checks
Tools	Figma (variables, components, Dev Mode), Framer, Git and GitHub, Claude Code and Figma MCP, HyperFrames for launch films
Domains	Sports data, marketplaces, finance and wallets, corporate and travel websites

EDUCATION

MSc Information Technology — Nigerian Defence Academy, Kaduna · 2024 – 2026

BSc Computer Science — Ahmadu Bello University, Zaria · 2016 – 2021
