Muwaffaq Yusuf

Product designer & design engineer

SUMMARY

Product designer with **4+ years** across sports tech, marketplaces and fintech, and I build what I design. I set up the design system before the screens, design every state rather than just the happy path, and take work from Figma to production code in Next.js and Tailwind. I have designed and built **8 websites and apps**, set up **5 design systems** and shipped **2 live products**, including my own lending app, treeti: **72 people** signed up and **₦549,300** was recorded in its first three weeks.

EXPERIENCE

Lead Designer · Nūring

Jan 2025 – Present · Remote (Ontario, Canada)

Nūring makes a smart glove that reads grip to measure an athlete's effort, recovery and load, starting with baseball.

- Built the Nūring design system in Figma: **62 components, 39 colour tokens and 14 full-page templates**, shared by every surface of the product.
- Redesigned the web app for athletes, coaches and guardians, and **coded its front end** on that system, then worked with the backend engineers as they connected the APIs.
- Designed data-first screens that turn grip signals into clear decisions: a five-band score scale measured against each player's own baseline, and status colours that always come with a word.
- Prototyped interactions in Framer before handoff, and wrote the specs engineering builds from.

Product / UI Designer · HoBeei

Apr 2022 – Dec 2025 · Remote

UI designer on a gamified free-cycling marketplace with a virtual currency, live bidding and social features. I turned the founder’s product concepts and sketches into the full UI.

- Designed the marketplace UI: browsing, search and filters, item pages and listing flows.
- Designed live bidding with **every state**: active bids, countdowns, won and lost, plus loading, empty and error screens.
- Designed the Buzzes virtual wallet: balance, transaction history, and earn and spend flows built to earn trust in a non-cash economy.
- Built the Figma design system engineering worked from, and carried specs and assets through to shipped builds.

SELECTED WORK

treeti `LIVE · MY OWN PRODUCT`

usetreeti.xyz

Interest-free lending records between family and friends, with witnesses, repayments and reminders. I designed and built it in Next.js and Supabase. Launched 14 October 2026: **72 sign-ups, 23 agreements and ₦549,300 recorded** in three weeks, and tester feedback simplified 8 flows within 10 days.

QuickPay `CLIENT · FINTECH`

Case study

A Nigerian wallet and bills app. I audited **105 inconsistent screens** and rebuilt them as about 91 on one token system: 120+ variables in light and dark, 52 documented components and 690 layers renamed. I raised contrast to WCAG AA (card labels from 2.59 to 4.59 : 1), wrote seven rules for showing money, designed every state, and specified motion with springs and haptics for iOS and Android.

SELECTED WORK, CONTINUED

PharmaQuest LIVE

pharmaquest.pages.dev

Gamified practice for the Canadian pharmacist qualifying exam (PEBC), built for a pharmacist preparing for it. **257 questions** with a rationale for every option, spaced repetition, daily streaks, XP and 12 badge series. Designed and built in React, Vite and Tailwind, with cloud save, on Cloudflare Pages.

Sarki Energy CLIENT · CORPORATE SITE

Case study

A site that explains eight business lines to very different visitors, from a homeowner buying cooking gas to a government agency. I mapped the brief into **31 page types** before designing, and shipped 26 in Next.js on Cloudflare, including a station locator and working enquiry and quote forms.

Attik CLIENT · WEB AND FILM

Case study

A new homepage, launch film and social reels for a furniture studio, designed to sit in front of its existing 3D studio, room planner and shop without replacing any of them.

Almutamir · Axis Urban CLIENT · WEBSITES

A rebuilt website for a Hajj and Umrah booking company, with a before-and-after film, and a seven-page Framer site for an urban infrastructure and modular housing company.

SKILLS

Product design	Design systems and tokens, information architecture, every-state design (loading, empty, error, pending), prototyping, motion specs, accessibility to WCAG AA
Front end	Next.js, React, Astro, Vite, TypeScript, Tailwind, HTML and CSS, Supabase, Cloudflare Pages and Workers
Tools	Figma (variables, components, Dev Mode), Framer, Claude Code and Figma MCP, Playwright, HyperFrames for launch films
Domains	Sports data, marketplaces, fintech and wallets, corporate and travel websites

EDUCATION

MSc Information Technology — Nigerian Defence Academy, Kaduna · 2024 – 2026

BSc Computer Science — Ahmadu Bello University, Zaria · 2016 – 2021
